

## WoundRounds IS NOT

Not another EMR system.

Not a physician, NP or PA group.  
WoundRounds does NOT make wound rounds in facilities, nor do we replace your clinical staff.

Not an education provider.

Not a Medicare Part B billing company.

Not simply a documentation tool.

Not viewed as a cost to healthcare facilities but an investment that pays for itself.

## WoundRounds IS

WoundRounds enhances your current system and takes wound management to the next level. We provide performance management tools so you can focus on wound care and prevention.

WoundRounds gives facilities the tools to provide excellence in wound care and risk prevention. Whether your facility has wound care staff or outsource wound management/wound rounding, your facility owns the risk and liability surrounding wounds. WoundRounds gives facilities a real-time report card on their wound management system.

WoundRounds prompts clinicians in wound management and risk prevention:

- To provide consistent wound assessment and complete documentation
- To capture optional wound photographs
- To suggest appropriate interventions based on WOCN, NPUAP, the Braden Score and the PUSH tool

WoundRounds provides complete documentation that facilities use to recover eligible Medicare Part B billings, averaging \$390/month, using in-house or third party services.

WoundRounds users report:

- 75% reduction in facility-acquired pressure ulcers, reported in a clinical study
- \$27,333 annual savings in reduced staff overtime from less wounds
- \$75,000 annual savings from reduced wound care costs
- Recovery of over \$60,000 annually from reduced re-hospitalizations

WoundRounds pays for itself with improved clinical outcomes, reduced costs, and lowered risk and liability. Our customers speak of WoundRounds in terms of return-on-investment.

“WoundRounds pays for itself.”

— Ben Esquerra, Administrator,  
Northwoods Care Centre
